A Frenkel defect or dislocation defect is a type of defect in crystalline solids named after its discoverer Yakov Frenkel. In an ionic crystal, this defect forms when an ion is displaced from its lattice position to an interstitial site, creating a vacancy at the original site and an interstitial defect at the new location without any changes

It so often happens that I receive mail - well-intended but totally useless - by amateur physicists who believe to have solved the world. They believe this, only because they understand totally nothing about the real way problems are solved in Modern Physics.
