

biology life on earth pdf

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate.

Life - Wikipedia

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field.

2018: A practice essay on "Explain the relationship between evolution and biodiversity." Discusses the overarching ideas about the Diversity of Life, thus useful for note taking.

Biology - Bored of Studies

Microglia, the brain's primary immune sentinels, quickly regenerate and restore their population after an acute insult. Lihong Zhan, Li Gan and colleagues use lineage tracing to address the debate about the origin of repopulating microglia and describes the spatial and temporal characteristics of microglial regeneration.

PLOS Biology: A Peer-Reviewed Open-Access Journal

Carbon Dioxide (CO₂) is a natural constituent of the atmosphere with a density of 747 mg per cubic meter of air. Its concentration in the composition of air is roughly 0.032%; however, of all the organic compounds, carbon dioxide is by far the most important one for the sustainability of the biosphere (the whole of life on Earth).
