Michael Ionescu, Evogene Ltd., Rehovot, IL. The miCROPe symposium, which I attended twice (2015 and 2017), was very successful also this year and had proven again to provide a comprehensive interdisciplinary scientific review addressing aspects of beneficial plant-microbe interaction relevant for both academy and industry.

miCROPe 2019 :: HOME

A microorganism, or microbe, is a microscopic organism, which may exist in its single-celled form or in a colony of cells. The possible existence of unseen microbial life was suspected from ancient times, such as in Jain scriptures from 6th century BC India and the 1st century BC book On Agriculture by Marcus Terentius Varro.

A number of insects establish symbiotic associations with beneficial microorganisms in various manners. The bean bug *Riptortus pedestris* and allied stink bugs possess an environmentally acquired *Burkholderia* symbiont in their midgut crypts.

Riptortus pedestris and Burkholderia symbiont: an ideal

Annals of Agricultural Sciences (AOAS) is the official journal of Faculty of Agriculture, Ain Shams University. AOAS is an open access peer-reviewed journal publishing original research articles and review articles on experimental and modelling research at laboratory, field, farm, landscape, and industrial levels.

Generally a batch is completed in around 36 hours but this time can be shortened by pre-feeding the compost or vermicompost to be used. This is outlined in my article More on Compost Tea 2013 along with some basic recipes.

Microbe Organics

The STAR Methods text and Key Resources Table are part of the main article and are not considered Supplemental Information. However, please note that we have updated our guidelines for formatting supplemental items (e.g., supplemental figures, tables, movies, etc.).

STAR Methods Authors Guide: Cell Press

The dream of fending off old age is as old as human civilization. Given the global aging of the population, developing interventions that preserve health in old age and postpone the onset of age-related diseases is more important than ever.

Bacteriocins are regarded as potential alternatives for antibiotics in the absence of highly resistant bacteria. In particular, two-peptide (class IIb) bacteriocins exhibit the maximum activity through the synergy of two components, and their antimicrobial spectra are known to be relatively wide.

Salicylic acid (SA) is a plant defense hormone required for immunity. Arabidopsis NPR1 and NPR3/NPR4 were previously shown to bind SA and all three proteins were proposed as SA receptors.

Opposite Roles of Salicylic Acid Receptors NPR1 and NPR3
