In geology, a blowhole or marine geyser is formed as sea caves grow landwards and upwards into vertical shafts and expose themselves towards the surface, which can result in hydraulic compression of sea water that is released through a port from the top of the blowhole. The geometry of the cave and blowhole along with tide levels and swell ...

Blowhole (geology) - Wikipedia

The ESRF has sponsored studies on oil and gas exploration and development on frontier lands, including such topics as environmental effects on fish, bird and animal habits and habitats, iceberg detection and flow patterns, oil spill prevention and countermeasures, dispersant effectiveness in cold waters and ice, frontier social and economic ...
