The dynamic and reversible N 6-methyladenosine (m 6 A) RNA modification installed and erased by N 6-methyltransferases and demethylases regulates gene expression and cell fate.

m6A Demethylase ALKBH5 Maintains Tumorigenicity of

Cytochromes P450 (CYP) are a major source of variability in drug pharmacokinetics and response. Of 57 putatively functional human CYPs only about a dozen enzymes, belonging to the CYP1, 2, and 3 families, are responsible for the biotransformation of most foreign substances including 70â€“80% of all drugs in clinical use.

Cytochrome P450 enzymes in drug metabolism: Regulation of
